STONEVILLE NO. 2-A

Another New Stoneville Cotton

Picking Qualities—Excellent, medium large fluffy bolls. Well open

Plants—Medium vigorous.

Maturity—Early.

Boll Size—60 to 70.

Lint Length—1-1/32" to 1-3/32".

Lint Percentage { Valley land 33 to 35.
Hill land 35 to 37.

Foliage—Medium light.

Stormproofness—Good.

Stoneville No. 2-A is a straight selection from Stoneville No. 2 and is similar to the parent strain. The lint percentage is better, and the bolls are larger with the picking quality much improved. The lint is slightly longer and much more uniform. The strain produces a very fine quality lint, with a minimum of neps.

The record that Stoneville No. 2 has made throughout the Cotton belt is well known to those who are familiar with cotton varieties. Few other varieties have proven so satisfactory over such a large part of the Cotton Belt. It has constantly ranked among the leading varieties in official tests from Texas to the Atlantic coast. In our new strains, and variety tests Stoneville No. 2-A has produced more lint of better quality, than Stoneville No. 2. When we offer to the public Stoneville No. 2-A, as an improvement over Stoneville No. 2, enough has been said.

History of Stoneville Cottons

The original Stoneville strains, No. 1 and No. 2, were developed by plant selection from Lone Star 65, the original selections being made by Dr. H. B. Brown in 1923, while working for the Stoneville Pedigreed Seed Co. Lone Star 65 is thought by Dr. Brown to have resulted from an accidental cross between Texas Lone Star and Mississippi Station Trice.

The two original strains of Stoneville differed from each other according to the following description:

Stoneville No. 1: Dwarfy, medium spreading plant, big boll, very good lint percent, and very prolific for a big boll cotton. The No. 4 and No. 4-A, are selections made by The Stoneville Pedigreed Seed Co., from Stoneville No. 1.

Stoneville No. 2: More vigorous spreading plant than No. 1, smaller boll and seed, but very prolific and a good picker. No. 2-A, No. 3, and No. 5 are all selections from No. 2, made by The Stoneville Pedigreed Seed Co.

The men who develop new and better strains of cotton are public benefactors and deserve your seed business. The Seed Breeders are in position to supply you with the very best seed of their strains at a reasonable price.

STONEVILLE NO. 3

A COTTON WITH A GREAT RECORD

Plant Type—Rather vigorous and spreading.

Maturity—Extremely Early.

Picking Qualities—Very good, bolls open well.

Stormproofness—Good.

Boll Size—70 to 80 per pound.

Lint Length—1" to 1-1/8" depending on soil type.

Lint Percentage—
Valley Land 34% to 36%
Hill Land 36% to 38%

Foliage—Very Light.

Probably no other cotton of its staple length is so popular over so wide an area as is Stoneville No. 3. It is always among the highest yielders, is extremely early, prolific, and absolutely safe any season. Its staple length is just right for upland sections and its lint percentage and picking qualities are good enough to please almost any farmer. Its light foliage makes Stoneville No. 3 well adapted to very fertile soils.

Stoneville No. 3 is becoming more popular each season in large sections of Alabama, North Mississippi, South Louisiana, South Texas, and Western Old Mexico.

We Think a Great Deal of Stoneville No. 3

STONEVILLE NO. 4-A

The Earliest of All Big Boll Cottons

Boll Size—50 to 60.

Picking Qualities—Excellent; bolls are large, round and open well

Plants—Dwarfy, rather spreading.

Maturity—Very early.

Stormproofness — Excellent, locks hold in boll well, does not string out.

Prolificness—Very prolific for big boll cotton.

Foliage—Medium.

Lint Percentage— { Hill Land 35 to 38
Valley Land 33 to 35.

Lint Length—1" to 1 3-32".

Stoneville No. 4-A is a selection from Stoneville No. 4, has a larger boll, and is more prolific. It is an outstanding big boll cotton for very fertile soil.

Stoneville No. 4-A is the only extremely early big boll cotton with which we are acquainted. Although we recommend this cotton most highly for very fertile lands enormous yields may be expected from it on thin uplands where fertilizers are used liberally, and the rows narrowed, with reasonably thick spacing in the drill.

Your cotton pickers will appreciate this strain.

STONEVILLE NO. 5

Today the Greatest of All Poor Land Cottons

Plant Type—Rather vigorous and spreading.

Maturity—Early.

Picking Qualities—Good, bolls not sharp pointed, opens well.

Boll Size—70 to 80 per pound.

Stormproofness—Good.

Lint Percentage { Hill Land 38% to 41%.
Valley Land 36% to 38%.

Lint Length—1 to 1-3/32 inches.

Prolificness—Very Prolific.

Foliage—Light, similar to No. 3.

Stoneville No. 5 is one of our newest Stoneville strains, of which seed are available in quantity, and we believe is destined to be the most popular cotton for thin lands the country has yet seen. It is early, productive, has a high lint turnout, stormproof, picks easy, and produces a good strong staple on the poorest hill lands.
